

Fashion

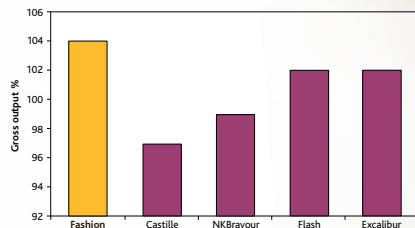

WINTER OILSEED RAPE

Fashion is now recommended for both the East and West region and the North region, where it joins the HGCA Recommended List as the highest gross output conventional variety. High yield potential, combined with excellent oil contents of 45.2% in the East and West and 45.0% in the North and strong agronomic features, should ensure Fashion's popularity on farm and in the market.

Gross output – North

Gross output – East and West

HGCA RL 2011/12. Full database at www.hgca.com

Fashion shows good autumn vigour and establishes well. It has good resistance to light leaf spot and stem canker, which is important now with tighter rotations. Fashion is stiff-stemmed and shows excellent resistance to lodging. Its medium maturity aids an easy and timely harvest.

Resistance to lodging	(1-9)	8
Stem stiffness	(1-9)	8
Stem canker	(1-9)	5
Light leaf spot	(1-9)	6

Key characteristics

- Ideal variety for growing throughout the UK
- High gross output • Good autumn growth
- Excellent standing power • Very good disease resistance
