The improved root structure of hybrid varieties enables improved scavenging for water and nutrients making them less susceptible to difficult growing conditions. **Flash** has the explosive growth

power to really take off during the early spring months even after the harshest of winters. **Flash** shows good recovery from pigeon damage.

**Flash** has excellent agronomics and scores well for disease resistance. With a good score for lodging and stem stiffness, an effective crop management regime will enable growers of **Flash** to take full advantage of its high gross output.

Flash - agronomics & disease resistance	East & West	North
Resistance to Lodging	7	7
Stem Stiffness	7	7
Stem Canker	4	4
Light Leaf Spot	5	5
