

Temple – stress free cropping

Temple offers an excellent combination of performance characteristics. A conventional variety, it shows excellent early establishment vigour with good gross output (103%) and high oil content (45.4%).

Excellent Light Leaf Spot resistance makes it particularly suited to the North. Medium flowering reduces the chance of frost damage, and early maturity ensures a crop that can be harvested at the right time.

TEMPLE – summary

- ❖ A good combination of characteristics
- ❖ Excellent establishment
- ❖ Good LLS resistance
- ❖ Short & stiff stem
- ❖ Medium flowering and early maturity
