

DUPLO

Hybrid Oilseed Rape

Status: AHDB Candidate List 2021/22

DUPLO is one of DSV’s flagship triple-layer varieties, combining top yields with three important traits from DSV. Just added to the AHDB Candidate List, DUPLO has been fast tracked to the UK market due to its exceptional vigour. DUPLO having highest vigour of any of DSV’s Triple Layered varieties in both autumn and spring. DUPLO has performed well all across Europe and the whole of the UK in all conditions, proving it is a very robust variety.

DUPLO is our breeders pick for growing in all conditions, features of particular note are its outstanding autumn vigour and DSV triple-layer protection of Turnip Yellow Virus (TuYV) resistance, pod shatter resistance, and RLM 7+ multigene resistance to phoma stem canker. DUPLO is part of the next generation of DSV varieties, which offer unique three-way disease protection and thus stability of accompanying yields.

DUPLO performed exceptionally well in DSV’s new non-inversion tillage trials which include no till. This proves that plants are optimised for strong establishment, exceptional performance and consistent gross output delivery in reduced cultivation systems. DUPLO is also the first variety which DSV have launched with our new improved N-efficiency, bred to ensure growers get the highest possible response to Nitrogen fertilisers so every kg applied works as hard as possible to produce yield with minimum waste.

Developed as a direct result of the Neonicotinoid ban and the need to move towards less intensive and more environmentally friendly production methods, DSV Triple Layered oilseed rape takes as much of the guesswork out of growing the crop as possible.

Gross Output	109% (E/W)
Seed Yield	107%
Oil Content	46.8%
Winter Hardiness	High
Autumn Vigour	High
Spring Vigour	High
Plant Height	146cm
Flowering	5.4
Maturity	6
Lodging	8
Stem Stiffness	8
Light Leaf Spot	5.2
Stem Canker	9
TuYV Resistance	R
Pod Shatter	R
