

SY ALIBABA IS A FULLY RESTORED HYBRID WITH 'BEST IN CLASS' CLUBROOT RESISTANCE.

Bred by Syngenta, SY ALIBABA is a hybrid clubroot variety. SY ALIBABA offers both yield and oil% improvements relative to region and an alternative choice to growers where clubroot exists. In French trials across two seasons SY ALIBABA has maintained a higher state of resistance to clubroot strains P1+ and P2+ than Mentor and remains fully resistant to strains P1 and P3.

YIELD

Source: Syngenta trials (n=46). 2 years data across ALL trials containing the two variety comparators Mentor & SY ALIBABA

- Extensive trial data across Europe from last 2 seasons
- 46 trials - fair comparisons
- 2015 season higher yield vs 2016
- SY ALIBABA + 0.4 t/ha vs Mentor

AGRONOMICS

Trial data from 46 sites from across Europe show SY ALIBABA as having similar agronomics to Mentor, but is shorter and has significantly better stem canker resistance. Light Leaf Spot scores are known to be robust. SY ALIBABA is a slow developer in the Spring and has a marginally lower oil% content than Mentor. Maturity is around 2 days later than Avatar, indicating mainstream maturity.

	Mentor	SY ALIBABA
Lodging	8	8
Plant height (cm)	150	146
Earliness of flowering	6	6
Earliness of maturity	5	5
Oil content (@9%)	44.9	43.5
LLS	6	5.5
Stem canker	3	8
